
PERGOLA

Innovative solution for a unique design! PERGOLA for shading outdoor and semi-open spaces.

A pergola, which offers both shadings with natural ventilation and protection from rain with the corresponding regulation of the rotating louvers. its most significant innovation and competitive advantage is the use of a special and hidden mechanism, which is protected inside the profiles, characterized by unique construction sturdiness and allows ease/speed during installation and maintenance.

By using the specially designed louvers, hermetic joints sealing and prevision of rainwater outflow in the perimeter frame are achieved. Available in various other louvers shapes and in a wide variety of colours.
(Wood effect, anodization and special RAL for coastal areas).
